## **Calliphora/Lucilia/Musca Flies.**

The containers that the flies have been provided in are for transport only!

The flies must be transferred into a suitable net or cage within the first 12 hours of arrival and can be fed on sugar water. Whilst in the containers the flies should be kept in a cool dark position, watching out for any excess moisture as this will kill all the flies very quickly.

If this advice is not followed and the flies are not transferred within the advised period, we can not replace any that die.
