Pomatoceros Triqueter Marine Tube Worm

Upon arrival, place the stones/shells that the Pomatoceros have made their tubes on into prepared marine salt water (ACS006 Synthetic marine salt). Light aeration is advised. Place the tank/tray in a cool position in partial light.

If the worms are to be kept for more than a week they can be fed using Marine Filter Feeder Diet (DTS095). If the stones/shells are packed in seaweed this should not be put into the tank as it may cause fouling.
